DECT WORLD 2026 • MONDAY OPENER

Cut the Cables, Keep the Sanity

Teaching stubborn industrial equipment & robots to talk wirelessly — without causing chaos on the shop floor.

Manulytica • Freeing industrial equipment one radio packet at a time

William Fish • Founder, Manulytica

www.manulytica.com

AUDIENCE CHECK

Spot the Difference...

THE FACTORY FLOOR REALITY CHECK

Welcome to Spaghetti Junction

Why is a million-pound robotic setup still tethered like a dial-up modem from 1998?

Zip-Tie Engineering: Miles of fragile umbilical cords.

Wi-Fi Roulette: Packets drop when the microwave runs.

The Sacred PLC: "Nobody touch it, it works."

WHAT IT LOOKS LIKE

Data Hidden in Plain Sight

20 Years
Average age of manufacturing equipment

74%
Rely on legacy systems and spreadsheets

20%
Production lost due to machine failure

DECT NR+ TO THE RESCUE

The ”Sleep-At-Night” Spec Sheet

< 1 ms

Quicker Than a Bladestop

Deterministic timing without lag-induced panic.

1.9 GHz

VIP Clean Spectrum

Zero bickering with warehouse Wi-Fi channels.

99.999%

Rock-Solid Uptime

More reliable than the office coffee maker.

£0.00

Zero Carrier Bills

Your finance director might actually hug you.

MOBILE ROBOTS

Curing Robot Separation Anxiety

Robots shouldn't freeze like startled deer whenever they drive behind a metal pillar.

Smooth Handovers: Seamless roaming across factory cells.

Swarm Harmony: No traffic jams at the charging bay.

E-Stop Peace of Mind: Instant wireless safety trigger.

THE MANULYTICA SECRET SAUCE

Brains Over Brute Force

No-Tears Retrofit

Plug into legacy gear without breaking warranties.

TinyML On-Device

Spots wobbly bearings before they turn into scrap metal.

Self-Healing Mesh

Reroutes signals around rogue forklifts effortlessly.

OPERATIONAL LIFECYCLE

The Closed-Loop Intelligence Workflow

PHASE 01

Capture

Digitize raw legacy signals directly at machine terminals.

PHASE 02

Connect

Transmit deterministically over private DECT NR+ mesh.

PHASE 03

Context

Detect anomalies and patterns using on-device TinyML.

PHASE 04

Control

Trigger automated robotic adjustments and safety shutoffs.

A TALE OF TWO FACTORIES

Old Habits vs. The DECT NR+ Way

The Headache Route

The Buffer Wheel: "Reconnecting to AP #14..."

Ladder Duty: Technicians adjusting antennas every Tuesday.

SIM Card Tax: Monthly cellular fees for stationary machines.

The Manulytica Route

Blissful Silence: Predictable deterministic delivery.

Autonomous Mesh: Devices organise themselves.

Pure Ownership: Private spectrum with zero subscription bills.

MONDAY MISSION ACCOMPLISHED

Life’s Too Short for Tangled Cables

Let's give factories & robotics the deterministic wireless freedom they deserve.

William Fish • Chief Cable Liberator, Manulytica

Questions, debates, or shop floor horror stories welcome!
