hophop

Making DECT-2020 NR+ accessible in Rust.

What

- *Toolkit:* library and applications
- *License:* MIT / Apache-2.0 contributing to Opener
- *Implementation:* Written in Rust along with Ariel OS project
- *Focus:* IoT, multi-tenant networks, usable security

Picture by rob Stoeltje, CC-BY

Ariel OS

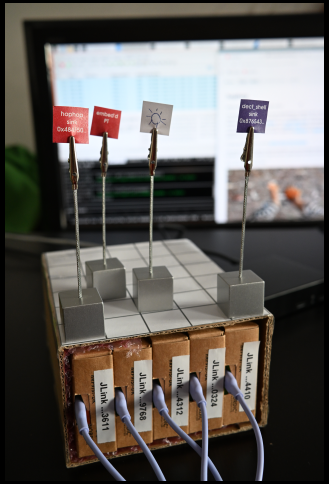

An Embedded Rust Operating System for Networked Sensors & Multi-Core Microcontrollers

- *Library OS* for microcontrollers
- *Kernel:* async; multi-tasking and multi-core
- *Community:* academia, industry, hobbyists
- *Focus:* Secure low-power IoT; portable applications

Showing today

- *embedded-pt*: CoAP server joining a network, E2E secured beyond NR+
- *bridge-pt*: Linux network access to IP network
- *sniffer*: streaming into Wireshark
